Summary

Backend Java Developer with **1+ year** of hands-on experience building and maintaining **microservices** in a production banking environment. Proficient in **Spring Boot**, Dapr-based inter-service communication, **Kafka**, and **Keycloak**-based authentication and authorization. Experienced with CI/CD pipelines (**Jenkins**), container orchestration (**Docker**, **OpenShift/Kubernetes**), and performance testing (**JMeter**). Strong foundation in designing secure, scalable REST APIs and resolving production-grade issues.

Experience

Backend Engineer

Jun. 2025 – Present

i-exceed Technology Solutions

- *Core Banking Microservices Platform* — Engineered and maintained **4+ Spring Boot microservices** handling authentication, authorization, device management, and session control in a production banking platform.
- Architected end-to-end **auth flows** using **Keycloak** (FIDO/passkey, SSO, admin roles); used **Redis** and **Valkey** for structured token storage and fast session lookups.
- **Reduced API latency by ~89%** (900ms → 80ms) via **PostgreSQL query optimization** (indexed lookups, N+1 rewrites); traced requests using **Grafana**, **Tempo**, and **Loki**; load tested with **JMeter**.
- Achieved **95% test coverage** across services and libraries using **JUnit 5**, **Mockito**, and **SonarQube**; resolved critical **production bugs** maintaining platform stability.
- Integrated **Dapr** for inter-service communication and **Kafka** for event-driven pub/sub; contributed to **OpenShift (OCP) / Kubernetes** deployments via **Jenkins** CI/CD.
- Applied **TruffleHog** (security scanning), **Vacuum** (API linting), **ArchUnit** (architecture checks), and **Arconia** (Spring Boot / Maven dependency upgrades) across the development workflow.

Data Engineer Intern

Feb. 2025 – May. 2025

Einweit Technologies

- Built **Python** microservices using **Flask** to automate real-time price updates for electronic shelf labels, integrating scheduling dashboards and AI-based pricing optimization.
- Designed **CI/CD pipelines** with Docker and GitHub Actions; collaborated cross-functionally to deliver low-latency data solutions using **PostgreSQL**.

Projects

CryptoVault – Secure Crypto Wallet | *Java, Spring Boot, Keycloak, Kafka, PostgreSQL, Redis* 2025

- Designed and built a multi-service crypto wallet platform with **API Gateway**, **auth-service**, **wallet-service**, and **transaction-service** using Spring Boot microservices.
- Implemented **Keycloak**-based authentication & RBAC (USER / ADMIN / SERVICE) with JWT validation, session management, token blacklisting, and secure inter-service calls.
- Handled AES-256-GCM encrypted private-key storage, wallet generation, Redis balance caching, and asynchronous transaction processing via **Kafka**.
- Used **PostgreSQL** for wallets & transaction history; integrated Sepolia testnet for ETH transfers and confirmation polling.

Technical Skills

Languages: Java, Python, SQL, Dart, JavaScript

Frameworks: Spring Boot, Spring Security, Dapr, Flask, FastAPI, Django

Messaging & Auth: Apache Kafka, Keycloak (OIDC/FIDO/Passkeys), SSO, JWT

DevOps & Cloud: Docker, Kubernetes, OpenShift (OCP), Jenkins

Databases: PostgreSQL, MySQL, MongoDB, Redis, Valkey

Observability: Grafana, Tempo, Loki

Testing & Tools: JUnit 5, Mockito, SonarQube, JMeter, ArchUnit, TruffleHog, Vacuum, Arconia, Git

Education

Sapthagiri College of Engineering

Bachelor of Engineering in Computer Science

Dec. 2021 – May. 2025

CGPA: 8.68
